

STROKE

*Do you know the signs of a stroke?
Do you know what you should do?*

Stroke Warning Signs:

- Trouble speaking or slurred **speech**
- Sudden change in **vision**
- **Inability to move** part of your body
- **Numbness/tingling** or **weakness** of your arms or legs

What should you do?

Call **911** or get to the closest hospital
as quickly as you can.

Stroke is the #4 cause of death and a leading cause of long term disability in the US. The time between onset of your symptoms and when you present to the hospital is very important – get there as fast as possible!
